Hello Maureen,

GES will be overseeing the Geoprobe event to collect closure soil samples at the Quebecor Facility on January 19-21, 2005. We apologize for the short notice. The rail dock area has very limited accessibility and has an unpredictable schedule. We were just notified of an opening for this week. Please contact me if you have any questions/comments regarding our Closure Sampling Workplan for Soils, dated November 16, 2004. Thank you for your assistance in continuing to move this project forward toward closure.

Denise N. Barnes, P.E.
